

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE.

THE present catalogue cannot be better described than in the words of the preface to the first edition. 'It is simply a classified list of eight or nine thousand Educational books now in use in this country, issued by nearly one hundred and fifty publishers.' Now, however, the number of titles presented to the reader is nearer fifteen thousand than eight or nine thousand. From this it would naturally be expected that the catalogue should be half as large again as it was before. It is so, in effect, though not apparently. By a modification of plan, the same amount of space has been made to hold much more than in the earlier edition.

Directness and simplicity of reference have been the aim throughout. Observing this, it has been found possible to dispense with a great many cross references, by which means room has been much economised. The omission of the letters S. K. that preceded a large proportion of the titles in the previous issue, has helped in the same direction. S. K. signified that such and such books were to be found in the unrivalled collection of educational literature at the South Kensington Museum. But as nearly every work that can be desired is almost as a matter of course to be found there, it has been thought that 'S. K.' might, without much lessening the value of the catalogue for reference, be omitted. Doing so has given space for about one thousand lines, meaning many more than that number of titles. In one case that could be named, six books (or different editions) are quoted in one line. This sort of compression also makes the catalogue seem less than it is. In strict parlance, the book is no larger than it was before, while the *volume* is, at least, half as much again.

For those who have been in the habit of consulting the first edition, it may be useful to state what plan has been followed in the arrangement of the present edition. As far as possible, titles are presented in the catalogue as they present themselves to the mind of the inquirer. Thus, books on Arithmetic are found instantly under 'Arithmetic,' on Dynamics under 'Dynamics,' and so on, without the intervention of 'Mathematics'; putting only under 'Mathematical' works that do not readily fall under a special head. The Greek and Latin classics, with their translations, *apparatus*, &c are found at once under their respective names, all information regarding them being grouped together in one place. This plan has, at any rate, one

advantage over putting the classics under 'Greek' and 'Latin' respectively. The reader, if he happen to forget whether an author is a Greek or Latin, is not baulked in his reference, and does not go away—a thing quite possible—under the impression that there exists nothing on the classic he has failed to find.

Information about countries is geographically given. Under 'England' are found the atlases, works on geography and history, maps, &c. that concern themselves with it. Under Hindostan the student finds quoted works on the geography, history, languages, &c. of our Indian Empire and its allied countries, from the borders of Persia to the Malayan Peninsula and Burmah, from Central Asia to the East Indian Archipelago, and so on. It may be added, that 'Oriental' has been preferred to 'Asiatic' as a general heading, because it avoids certain awkwardnesses. To take a case, the heading 'Asiatic' as a substitute for 'Oriental' would exclude Turkey, in part; Egypt altogether.

Chefs d'œuvre of English, French, and German literature are now put under the headings English, French, and German 'Classics' respectively, keeping under 'Reader' selections from *several* authors, only.

Books on two subjects are generally classed under the first of the two. Where one of the classes is comparatively poor in its number of books, as 'Mensuration' compared with 'Arithmetic,' the work is classed under Mensuration. English and familiar words are used as far as possible. 'Memory' takes the place of 'Mnemonics,' 'Short-hand' of 'Stenography.'

'Globes' are not now with geography, but form a class by themselves. For, with some, there are spheres celestial as well as spheres terrestrial. Geography, as its name implies, would confine them to the earth.

Those who have not tried it, have no idea of the occasional difficulty of finding a class for a book; sometimes, indeed, of knowing what it treats of. An example will be found in the present work. While it was passing through the press, a book (the *title*, that is to say) on 'Kinematics' presented itself. The class 'Dynamics' was already printed off. It has been put under 'Gymnastics,' which the Greek root of 'Kinematics' justifies, especially when 'Kinesipathy,' or the movement cure, is thought of. The point is, hat, now and then, in making a catalogue from *titles merely*, the drift of a work cannot be gathered.

During the printing of the catalogue, an important work has undergone a change of price that may be worth mentioning here. *Johnston's Royal Atlas* contains now additional maps, and is raised to six guineas.

A LIST OF PUBLISHERS,

WITH THEIR ADDRESSES.

In the body of the catalogue the names of the publishers of the various books quoted are of necessity given shortly, sometimes only indicated, because of the limited space at command. The full names and addresses are here subjoined, as a key to the publishers' column elsewhere. By means of this list any abbreviation will be readily understood.

SUPPLEMENTAL SERIES.

ANCIENT CLASSICS FOR ENGLISH READERS.

Edited by the Rev. W. LUCAS COLLINS, M.A.

ADVERTISEMENT.

The marked success and general popularity of the Series of 'ANCIENT CLASSICS FOR ENGLISH READERS,' lately concluded in Twenty Volumes, has been accompanied by some regrets, expressed both by the friendly critics of the press and in private quarters, at its not having been made somewhat more comprehensive. This has induced us to announce the issue of a 'Supplementary Series,' intended to comprise the works of some few Latin and Greek authors which, for various reasons, were not included in the original plan. This Series will appear, like the preceding, in Quarterly Volumes, at Half-a-Crown each, and in the same size and type. It will not be extended beyond Eight or Ten such Volumes. These will include the works of ARISTOTLE, THUCYDIDES, DEMOSTHENES, LIVY, LUCRETIVS, OVID, CATULLUS (with TIBULLUS and PROPERTIUS), ANACREON, PINDAR, &c.

The New Volume, **LIVY**, by the Editor, is now published, price 2s. 6d.

MESSRS. ROBERT COCKS & CO., NEW BURLINGTON STREET,
have published new editions of their popular little books, teaching the rudiments and the theory of music
and musical terms. We notice that Clarke's *Catechism of the Rudiments of Music* has reached the 179th
edition, 1s.; *Hamilton's Dictionary of 3,500 Musical Terms*, the 114th edition, 1s.; G. F. West's *Questions*
relating to the Theory of Music, the 15th edition, 1s.; and Sutton's *Elements of the Theory of Music*, the 5th
edition, 2s. Clarke's *Catechism* is a primer that children can readily understand, and it must effectively
impress them with the elements; and the *Dictionary* is a great aid to advanced pupils. West's *Theory*
supplies exercises and instruction in a catechistic form; and Sutton's *Elements* is on a similar principle,
but carries the pupil to a more advanced stage. Mr. Sutton, who is music-master at York Training
College, has embodied in his little work the full notes of lectures delivered by him after a close study of
the productions of Goss, Macfarren, Hullah, Dr. Callcott, Dr. Marx, Busby, Currie, Chappell, and others.

EDITED BY

Professor RAMSAY, LL.D., F.R.S., &c.

DIRECTOR-GENERAL OF THE GEOLOGICAL SURVEYS OF THE UNITED KINGDOM.

THE series of Orographical Maps now publishing have been prepared in order to supply the want long felt in Schools where Physical Geography is taught of good and reliable scientific Maps; and that these Maps fulfil those conditions the annexed extracts from the public prints sufficiently testify.

This series aims at exhibiting, in the first place, and prominently, the forms of relief and of contour of the land masses of the globe, and next of the sea-bed. At once a general idea is gained by the youngest student, on an inspection of the Map, of the relative position of the high, dry, and cold table-lands and mountainous regions, and the warm, moist, and fertile plains in each great division of the globe. For instance, in our own country it is seen at once why the eastern part is devoted to agricultural purposes, and the western part to mining and manufacturing; or by reference to the Map of Europe we can readily see how a rise in the level of the sea of a few hundreds of feet would suffice to inundate the whole northern part of Europe; and, on the other hand, how the general upheaval of the land of a few hundreds of feet would alter the whole contour of Europe, connecting the British Isles with the Continent, and annihilating the North Sea and the Baltic.
